EXPECTATIONS AND FEATURES OF THE DESIRED JOB

ECONOMIC SECTOR: **1.** education, training, research and development /**2.** education, training, research and development

CAREER FIELD: 1. R&D and patents / 2. Engineering and design / 3. Management DESIRED JOB:

Aerospace and Aeronautic Engineer

PREFERRED DISTRICT TO WORK IN: 1.

AVAILABILITY FOR BUSINESS TRAVELS: Yes, including relocation

Career Goal

My goals for the long-term period mainly consist in continuing the research activity in engineering field. Considering the nature of my studies and background, this could be either done in an university, as well as in a R&D department of a high level company.

WORK EXPERIENCES

Main activities and responsibilities: Structural digital twins for aircraft design Employed as: office worker - fixed-length contract | Company sector: Engineering and design

Main activities and responsibilities: Research and technology development in the field of Vibration and Acoustics. Working as: other, self employed | Company sector: Engineering and design

Main activities and responsibilities: PRIN - DEvelopment and applications of a VIrtual hybrid platform for multiscale analysis of advanced StructUres of aircraft (DEVISU). Employed as: other - fixed-length contract | Company sector: Engineering and design

Main activities and responsibilities: R&D Officer in metamaterials for vibroacoustic applications. Employed as: intern/trainee - indeterminate length contract | Company sector: Engineering and design

Main activities and responsibilities: Care of customers (airlines) during the maintenance process, market analysis. Employed as: intern/trainee - internship | Company sector: Customer service

Main activities and responsibilities: Active noise and vibration control in the automotive sector, as part of the Low Noise project. Employed as: intern/trainee - undergraduate internship | Company sector: R&D and patents

Currently employed: Yes Registration at the employment office: Yes Voluntary service: Yes

Work experience made during studies: Yes

OTHER POSTGRADUATE STUDIES

Learning to Teach (L2T)

Politecnico di TORINO

The owner of this Badge participated in the training course proposed by the Teaching and Language Lab of the Polytechnic of Turin with the Learning To Teach (L2T) project whose objective is to build in the participants basic theoretical-practical skills for teaching and learning in university. The training activities of the project activate learner centered models acted in community (Learning Community) within which, in an interdisciplinary and participatory form, comparisons, elaborations, reflections and sharing on values, approaches, experiences and teaching practices are developed enhancing the active contribution of the students. The course unfolds in flipped environments and is developed in a modular form through seminars, lessons and workshops conducted in co-teaching by expert teachers. Duration: 2 months

Learning to Teach with Innovative Teaching Project (L2T_ITP) Politecnico di TORINO

The owner of this Badge has participated in the training organized by the Teaching and Language Lab of the Politecnico di Torino's Learning To Teach with Innovative Teaching Project (L2T_ITP), which aims to build innovative and research skills (scholarship of Teaching and Learning) in university teaching and learning practice. With respect to the participants, the project seeks to ensure the acquisition of reflection, planning, methodological, evaluation and research skills scientifically conducted within their teaching context. Adherence to the project requires prior attendance at a Learning to Teach (L2T) theoretical-practical training course for building basic skills for a kind of university teaching focused on learner-centered models developed within interdisciplinary professional communities. Duration: 2 months

24 crediti formativi (CFU)

Università Telematica PEGASO Basic skills in anthropo-psycho-pedagogical disciplines and teaching methodologies and technologies. Duration: 1 months

FRANCE 2017

European Union program (VIPER: Vibroacoustics of Periodic Media (EU H2020))

At: Université de Franche-Comté

Place: Besançon (France) | Language: English | Duration: 36 (months)

VIPER is a European Joint Doctorate network focused on research in VIbroacoustic of PERiodic media. Structural periodic design is a powerful strategy for lightweight structures achievements while remaining a convenient solution for manufacturing aspects. One of the research targets is the inclusion of vibroacoustic design rules at early stage of products development through the use of periodic media which exhibit proper dynamic filtering effects.

JOURNAL ARTICLES 2024	M. Filippi, D. Magliacano, M. Petrolo, E. Carrera, Wave Propagation in Prestressed Structures with Geometric Nonlinearities Through Carrera Unified Formulation Review: AIAA Journal This paper deals with the analysis of wave propagation characteristics in various prestressed structures with geometric nonlinearities using the Carrera Unified Formulation (CUF). This knowledge paves the way toward the design and optimization of prestressed systems with enhanced acoustic performance, and that fosters the development of sound absorption, noise insulation, and structural isolation. arc.aiaa.org/doi/10.2514/1.J064695
CONFERENCE PROCEEDINGS 2024	M. Filippi, D. Magliacano, M. Petrolo, E. Carrera , Wave Propagation in Pre-stressed Structures with Geometric Non-linearities through Carrera Unified Formulation Organization: 30th AIAA/CEAS Aeroacoustics Conference (2024) This paper investigates the wave propagation characteristics in pre-stressed structures with different geometric non-linearities utilizing the Carrera Unified Formulation (CUF). Specifically, a CUF- modeled metallic box beam is considered herein. This knowledge paves the way for designing and optimizing pre-stressed systems with enhanced acoustic performance, fostering advancements in sound absorption, noise insulation, and structural isolation. <u>arc.aiaa.org/doi/10.2514/6.2024-3028</u>
CONFERENCE PROCEEDINGS 2024	M. Filippi, D. Magliacano, M. Petrolo, E. Carrera, Variable-kinematics finite elements for propagation analyses of two-dimensional waveguides Organization: 30th AIAA/CEAS Aeroacoustics Conference (2024) This paper introduces advanced kinematics plate and shell models for evaluating the dispersion characteristics of two-dimensional waveguides. The models utilize high-order functions to interpolate primary variables across the waveguide, both in thickness and above its plane. The obtained results are compared against numerical and analytical solutions available in the existing literature. arc.aiaa.org/doi/10.2514/6.2024-3078
JOURNAL ARTICLES	D. Magliacano, G. Catapane, G. Petrone, K. Verdière, O. Robin , Sound transmission properties of a porous metamaterial with periodically embedded Helmholtz resonators Review: Mechanics of Advanced Materials and Structures

This CV contains confidential information collected by the Inter-universities Consortium AlmaLaurea. Full or partial reproduction and diffusion to third parties are strictly forbidden. 	Publisher: Taylor & Francis Group, LLC The main scope of this work is to study the effect of embedding a periodic pattern inside a porous material, in order to passively improving its acoustic performance in terms of sound transmission loss. A contemplated application is the improvement of classical aeronautical soundproofing packages. In order to reach this goal, numerical models of an acoustic package including periodic patterns are implemented using the finite element method and the Transfer Matrix Method. doi.org/10.1080/15376494.2023.2237699
CONFERENCE PROCI 2023	EEDINGS A. Casaburo, D. Magliacano, G. Petrone, F. Franco, S. De Rosa, Determination of Johnson-Champoux-Allard model parameters with machine learning techniques Organization: NOVEM 2023 The purpose of this work is to investigate the performances of machine learning techniques in determining the parameters of JCA model, in order to understand whether missing values can be predicted just relying on a set of already performed experimental characterizations when not all the experimental setups are available. In particular, Gaussian processes are used on a training set describing porous materials in terms of JCA parameters and the values of acoustic indices at fixed frequencies.
CONFERENCE PROCI 2023	EDINGS G. Catapane, E. Manconi, D. Magliacano, G. Petrone, F. Franco, S. De Rosa , Scale modelling and Wave Finite Element Method for the analysis of complex waveguides at high frequency Organization: NOVEM 2023 The present work proposes an innovative scale model, based on WFEM, where dispersion relations of a periodic structure with isotropic material are studied and compared with a down-scaled orthotropic solution, aiming to preserve dispersion curves of the isotropic one, but with a substantially smaller number of mesh elements. To this aim, constitutive matrix elements of the orthotropic plate are properly altered with reference to the scale factor used to reduce the periodic cell's section.
CONFERENCE PROCI 2022	G. Catapane, D. Magliacano, G. Petrone, A. Casaburo, F. Franco, S. De Rosa , Labyrinthine Resonator Design for Low-Frequency Acoustic Meta-Structures Organization: WMVC 2022 The scope of this project is to prove that labyrinthine resonance frequency cannot be predicted through conventional quarter- wavelength formula, maynly because natural frequency depends just on tube length. Moreover, a new analytical formula is proposed by considering the main parameters of labyrinthine resonators: number of labyrinth branches, dimension of the single- port air-inlet, and the total length of the labyrinth.
JOURNAL ARTICLES 2022	G. Catapane, D. Magliacano, A. Casaburo, G. Petrone, F. Franco, S. De Rosa, Semi-analytical estimation of Helmholtz resonators' tuning frequency for scalable neck-cavity geometric couplings Review: CEAS Aeronautical Journal Publisher: Springer The main target of the present research work is to obtain an accurate prediction of the tuning frequency of a Helmholtz- resonating device, whose resonance properties are exploited in a wide part of acoustic meta-material design. doi.org/10.1007/s13272-022-00592-4
CONFERENCE PROCE	S. De Rosa, G. Catapane, A. Casaburo, D. Magliacano, G. Petrone, F. Franco , A versatile offset operator for the discrete observation of coupled vibroacoustic systems Organization: 9th International Symposium on Scale Modeling The recently defined VOODOO method has demonstrated that a transformation matrix can be defined by using the Betti theorem and it can be invoked for both deterministic and stochastic loads. In principle, with this transformation, two completely different systems can be connected, according to few rules. This paper provides the theoretical framework underlying the extension of VOODOO to the structural-acoustic coupling.

JOURNAL ARTICLES 2022	A. Casaburo, D. Magliacano, G. Petrone, F. Franco, S. De Rosa, Gaussian-Based Machine Learning Algorithm for the Design and Characterization of a Porous Meta-Material for Acoustic Applications Review: Applied Sciences Publisher: MDPI The scope of this work is to consolidate research dealing with the vibroacoustics of periodic media. This investigation aims at developing and validating tools for the design and characterization of global vibroacoustic treatments based on foam cores with embedded periodic patterns, which allow passive control of acoustic paths in layered concepts. doi.org/10.3390/app12010333
CONFERENCE PROCEEDINGS 2021	G. Catapane, D. Magliacano, A. Casaburo, G. Petrone, F. Franco, S. De Rosa, Evaluation of improved correction factors for the prediction of Helmholtz resonances Collection: Aerospace Europe Conference 2021 Organization: Council of European Aerospace Societies The main target of the present research work is to obtain an accurate prediction of the tuning frequency of a Helmholtz- resonating device, numerically modeled through a Finite Element approach. In this context, an investigation on a correction factor for the classical formulation used to estimate the Helmholtz resonance frequency starting from its geometrical characteristics, accounting for different-shaped resonators with varying neck/cavity ratios is performed.
JOURNAL ARTICLES 2021	G. Catapane, D. Magliacano, G. Petrone, A. Casaburo, F. Franco, S. De Rosa, Transmission Loss Analyses on Different Angular Distributions of Periodic Inclusions in a Porous Layer Review: Aerotecnica Missili & Spazio Publisher: Springer The scope of this paper is to investigate the sound transmission loss of an acoustic package of glass wool with embedded periodic inclusions, considering the possibility to improve a standard configuration and inserting the innovative package in a practical configuration used in the aeronautic field for noise suppression. Periodic inclusions are introduced to enhance the sound transmission loss performance of the acoustic package in the mid-high range of frequencies. doi.org/10.1007/s42496-021-00101-6
JOURNAL ARTICLES 2021	D. Magliacano, G. Petrone, F. Franco, S. De Rosa, Numerical investigations about the sound transmission loss of a fuselage panel section with embedded periodic foams Review: Applied Acoustics Publisher: Elsevier The scope of this paper is to investigate the sound transmission loss of a typical fuselage panel section, as well as to propose solutions based on the inclusion of a periodic pattern inside its foam core, which aim at passively improving the acoustic performance in a mid-high range of frequencies. In detail, a new fuselage panel configuration is numerically studied, starting from the state of the art regarding the acoustic packages based on porous meta-materials. doi.org/10.1016/j.apacoust.2021.108265
CONFERENCE PROCEEDINGS 2021	A. Casaburo, D. Magliacano, G. Petrone, F. Franco, S. De Rosa, Optimizing the acoustic properties of a meta-material using machine learning techniques Organization: Internoise 2021 The scope of this work is to consolidate research dealing with vibroacoustics of periodic media. This investigation aims at developing and validating tools for the design of global vibroacoustic treatments based on foam cores with embedded periodic patterns, which allow passive control of acoustic paths in layered concepts.
CONFERENCE PROCEEDINGS	G. Catapane, D. Magliacano, G. Petrone, F. Franco, S. De Rosa , Periodic resonator-based optimization of an acoustic pack- age

	made of glass wool Organization: rev2021 Nowadays, modern urbanization and traffic increase could cause severe noise-induced health damages , such as annoyance, sleep disturbance, or even ischemic heart disease, and thus the interest on environment noise control is quickly growing.
CONFERENCE PROCEEDINGS 2021	A. Pecoraro, D. Magliacano, G. Petrone, M. Filippi, F. Franco, S. De Rosa, Periodicity and quasi-periodicity effects on vibration band gaps: numerical investigations on one-dimensional structures Organization: AIDAA 2021 Periodic structures have found a big interest in engineering application because they introduce frequency band effects due to the impedance mismatch generated by periodic discontinuities in the geometry, material, or boundary conditions. Adding periodicity to structures leads to wave mode interaction, which generates pass-and stop-bands.

D. Magliacano, M. Ciminello, I. Dimino, M. Viscardi, A. Concilio,

Feasibility study for a tonal vibration control system of a mounting bracket for automotive gearboxes

Review: International Journal of Mechanics Publisher: North Atlantic University Union

A conceptual design of an active device able to attenuate the tonal vibrations of a mounting bracket for automotive gearboxes is addressed in this paper. A preloaded piezo stack actuator is used to counteract the unbalanced vibrations of the component by monitoring its operational deformations. <u>naun.org/cms.action?id=12113</u>

CONFERENCE PROCEEDINGS 2016

D. Magliacano, I. Dimino, M. Viscardi, A. Concilio, Active vibration control by piezoceramic actuators of a car floor panel

Collection: ICSV 23

Organization: International Institute of Acoustics and Vibration (IIAV)

The main purpose of this work is the implementation and experimental investigation of an active vibration control concept for vibration reduction in an automobile passenger compartment. For the control experiments, the floor panel of a medium class test car was equipped with a combination of piezoelectric actuators and accelerometers. The experimental activity focused on the rear under-seat panel of a car body and consisted of SISO and MISO feedforward control applications.

JOURNAL ARTICLES

2016

D. Magliacano, M. Ciminello, I. Dimino, M. Viscardi, A. Concilio, Active vibration control of a mounting bracket for automotive gearboxes Review: International Journal of Mechanical Engineering Publisher: IARAS Journals

The aim of this paper is to investigate the use of active vibration control in automotive gearboxes mounting brackets to reduce tonal disturbances. A combination of piezoelectric accelerometers and an internally preloaded piezo stack actuator is used to counteract their unbalanced caused vibrations.
